

Configuring Your Computer for UAWiFi

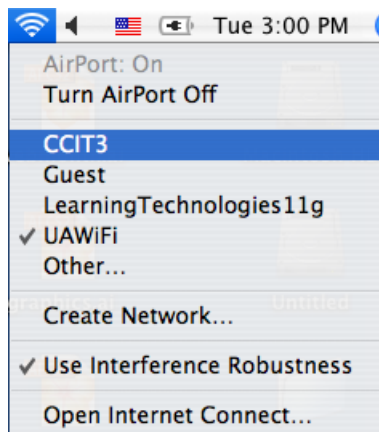

Mac OSX Edition | 2009–2010

UAWiFi is your best wireless choice on campus for both speed and security, but it can only be used after you have registered with your NetID and password.

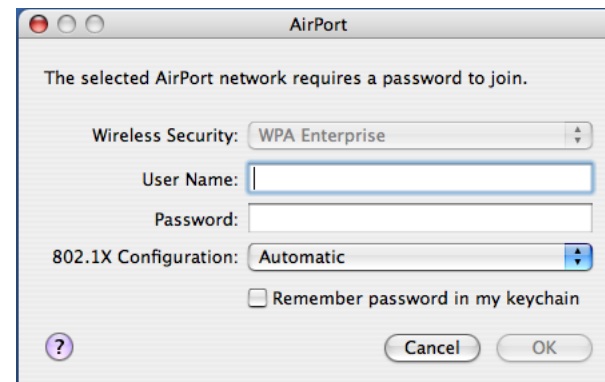

1. Go to the AirPort menu on the Menu Bar.

You will see UAWiFi as an available wireless connection. **If you do not see UAWiFi the wireless connection is not available from your location.**

Select "UAWiFi" from the drop-down menu.

2. Enter your NetID and password in the popup log-in window.

3. A window warning about the security certificate will pop up. Click "Continue".

"Continue" needs to be clicked within 60 seconds, or the connection attempt will time out and fail.

You are now on the UAWiFi wireless network!
